WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

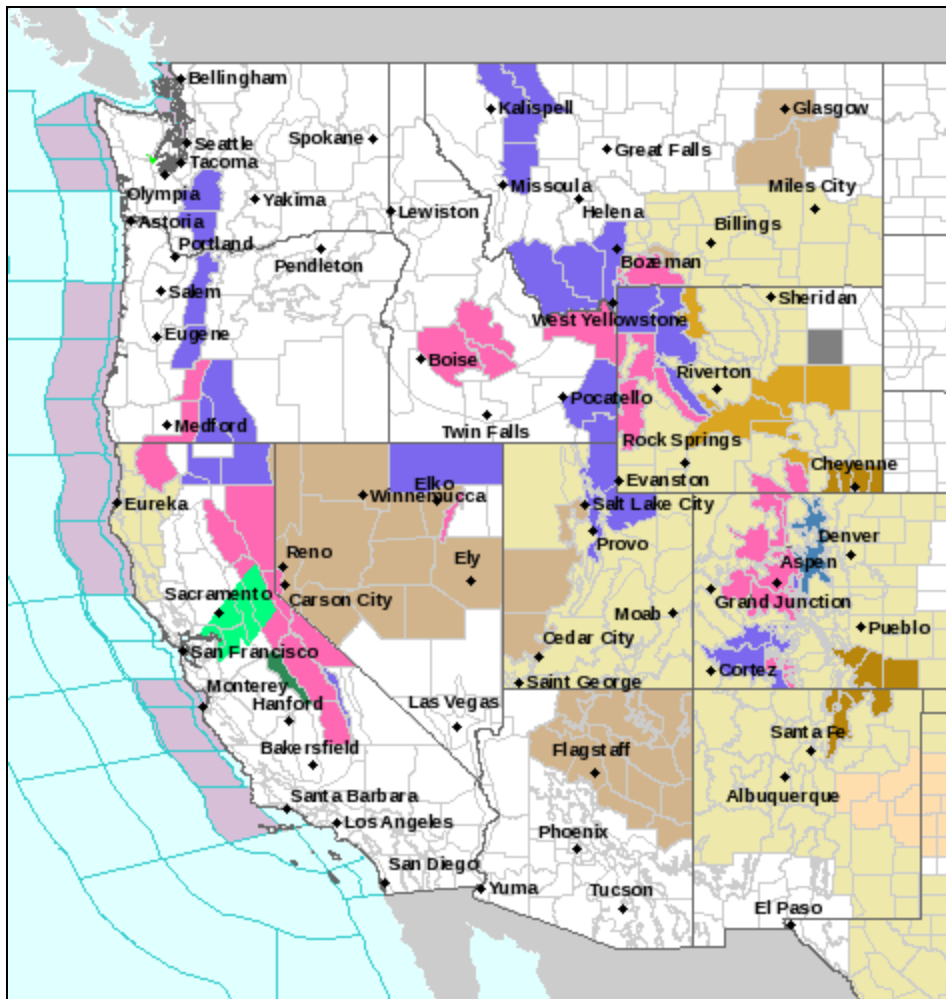

A vigorous Pacific storm system will continue its sweep over the area today and tonight. Precipitation will tend to favor the west facing coastal and Cascade/Northern Sierra ranges. The more significant snow accumulations will remain above 5500 feet. Due to atmospheric ridging, a dry forecast is in store Friday and Saturday. Temperatures will also rebound to near normal levels on Saturday. Light to moderate N to NE wind on Friday will give way to light and variable winds on Saturday. A weaker Pacific trough will approach late Sunday and induce a strengthening southerly flow across the region. Temperatures will climb to above normal status while also raising moisture levels in the atmosphere. A chance of primarily rain showers would be found across the northern third or so of the region. Next week could prove to be a transitional pattern change from the cool-damp weather, previously experienced the past 2 weeks, to a drier-warmer period with weaker Pacific disturbances impacting northern portions of the region. Too early to tell since the models have been flip flopping, thus confidence is low for much of next week.

SOUTHERN CALIFORNIA

A storm centered over the Pacific Northwest will bring a period of rain to Central California through Friday morning. Heavy rain continues over the Central Sierra this morning with an additional 2 to 4 inches of rainfall through Friday morning. Rain will start over Monterey County this afternoon and spread south to Santa Barbara County by this evening. 1 to 2 inches of rainfall will occur along the Big Sur Coast and trail off to less than a quarter inch of rainfall over Santa Barbara County. Little or no rainfall is expected across Southern California from this storm. Westerly winds of 20 to 30 mph with gusts to 50 mph will continue over windy mountain, desert, and Central Coast locations through Friday afternoon. There will be little change in temperature today, with mid 50s to mid 60s in the mountains and 70s to low 80s in the valleys. Temperatures will cool 5 to 10 degrees Friday as the storm moves to the east. Zonal flow will bring a little above normal temperatures Saturday through Monday. Local northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the Los Angeles County Mountains Saturday morning. Another storm moving into the Pacific Northwest will bring scattered showers with light rainfall accumulations to Central California Sunday night through Monday night. Above normal temperatures and low humidity will occur Tuesday and Wednesday as high pressure over Mexico expands northward into Southern California.
